“There’s One of Many Pages of a Mail Service Report that the Monroe has cut down the figuring time from days to hours”

FIGURING mail service reports is an endless chain of multiplications and divisions. Ten to thirty days’ time is not unusual to get out such reports. But one of the leading railroads of the country cut down their figuring time from days to hours by putting the burden on the Monroe Calculating Machine.

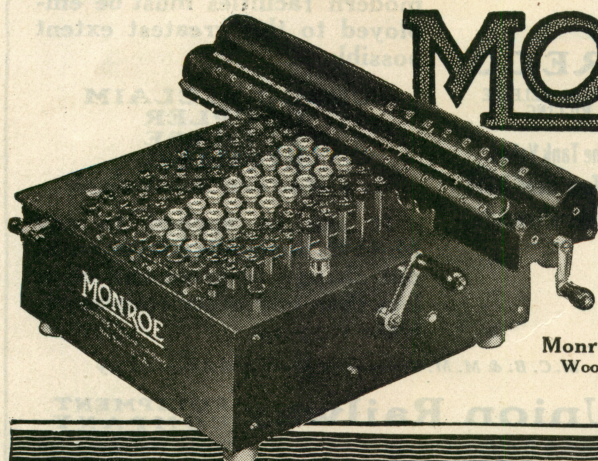

It is the simple and direct operation of the Monroe that appeals to railroad men. To add or multiply you turn the crank forward,—and backwards to divide or subtract. No set rule, no complements or reciprocals are necessary; and at every stage of the figure-work there is a visible check of the accuracy of your figures. And the Monroe is so simple and easy to op-

erate that any of your clerks can handle any type of figure-work after a few minutes’ practice.

The leading railroads of the country are conserving time, labor and eliminating costly errors by figuring on the Monroe, Shop Costs, Pro-Rating, Tonnage Reports, Distributions, Pay Rolls, Way-Bill Extensions, Engine and Car Mileage Reports, Engineering Formulae, etc.

Let us demonstrate in your office just how the Monroe fits in on your railroad accounting work. We will gladly show you how any of your figuring problems can be speedily figured on the Monroe, with a constant check of accuracy always before you. Use the coupon—there’s no obligation involved.

You will be well repaid by visiting our exhibit at SPACE 751, Balcony of Main Building, Young’s Million Dollar Pier

Instantly**

Don't Take Chances

It is just as important to be prepared to meet and overcome the hot box evil—a constant source of worry, delay and expense—as to provide against any other emergency that might arise to interrupt the free movement of passenger and freight train service.

There is only one efficient means. Use Mohawk Cooling Compound. Simple to apply, quick and positive in performance. It will relieve your cares and anxieties as far as hot boxes are concerned.
